Stepper Motor Linear Actuator Assemblies

Combining cutting-edge motor and lead screw technologies

Thomson offers three basic configurations – rotating screw (MLS), rotating nut (MLN) and actuator (MLA). The open architecture rotating screw and rotating nut motorized lead screws suit applications where external guidance is present or a high level of design flexibility is required, while the closed assembly of the motorized lead screw actuator is ideal to further simplify the design process and remove requirements for external guidance.

Technology Overview

Rotating screw assemblies (MLS) actuate by having the motor rotate a lead screw and translate a load that is attached to the lead nut. Rotating nut assemblies (MLN) actuate by rotating a nut within the motor body. Motion is achieved by constraining the motor and translating a load attached to the lead screw or constraining the lead screw and translating a load attached to the motor.

Rotating Screw Configuration MLS

The rotating screw design, which is ideal for rapid prototyping, features our patented Taper-Lock design to connect the lead screw to the motor shaft. It is best suited for applications where a high level of modularity or customization is required. Users have the freedom to configure an assembly from a range of lead screw, lead nut and motor options as needed for their applications.

Rotating Nut Configuration MLN

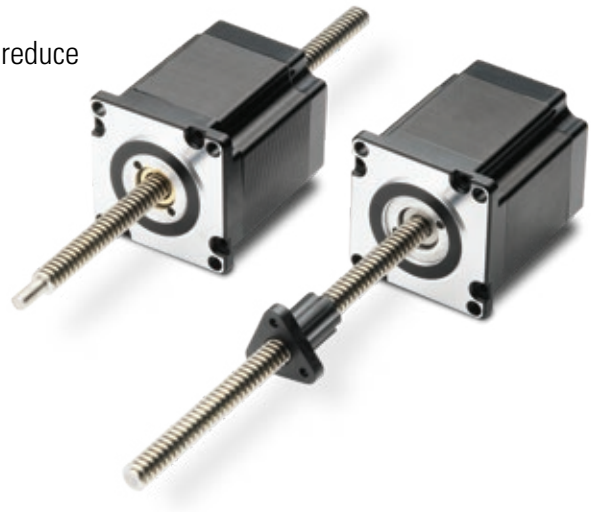
The rotating nut design features our patented integration of a lead nut into the motor rotor to maximize screw diameter, which increases load capacity. It is ideally suited for applications where no visible rotation is desired or where it is necessary to translate a load on either side of the motor.

Motorized Lead Screws

Thomson motorized lead screws combine a hybrid stepper motor and a precision lead screw together in one compact envelope. Patented Taper-Lock technology allows quick decoupling and secure, properly aligned connections. This combination offers several advantages over a traditional solution.

Improved Efficiency

Thomson provides a more efficient motorized solution to reduce power consumption, improve operating battery life, and decrease motor footprint. With this improved efficiency, an increase in system load performance or a reduction in power consumption can be expected – all while having a lower cost of ownership.



Increased Torque Density

Thomson motorized lead screws offer increased torque density over alternative solutions. By optimizing the motor performance and matching this with the ideal lead screw and nut design, Thomson has been able to increase the load capacity by up to 30% while maintaining the same motor footprint.

The Taper-Lock Advantage

The robust design of the Taper-Lock provides a secure, self-aligning connection between the lead screw and stepper motor.

Reduced Noise

Thomson can optimize your motor configuration and windings to limit motor harmonics and reduce motor noise at your application operating points.

Motorized Lead Screw Actuators

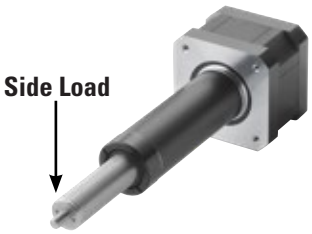
Thomson motorized lead screws are also available in an actuator configuration (MLA). The actuator is a fully housed solution in which the motion is taken care of for you – simply determine stroke length, linear travel per step or revolution (lead), and precision level to select an appropriate MLA. The actuator configuration offers a complete housing and integrates easily into your assembly with a similar range of end mounting and connection options as the rest of the motorized lead screw family.

Built-in Anti-Rotation

Our actuator configuration includes anti-rotation as standard with every product, eliminating the need for external guidance.

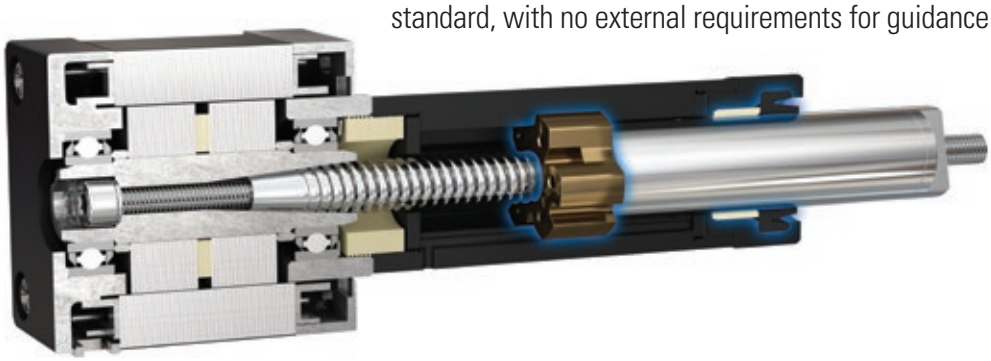
Side Load Capability

Actuator configurations are able to withstand some side and moment loading due to the bushing design included inside the assembly. Depending on load, speed and motion requirements, MLA assemblies can withstand a side load of up to 10% of axial capacity of the motor. For optimal performance, side and moment loads on MLA configurations should be minimized and avoided in the fully extended position.



Actuator Configuration MLA

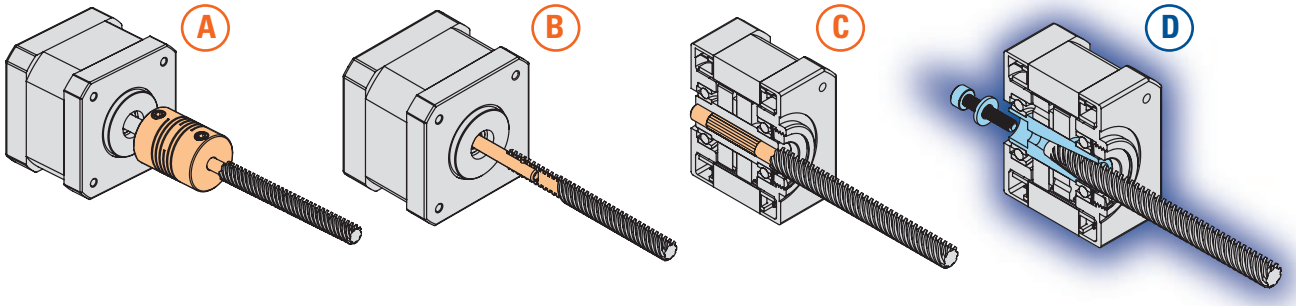
The actuator is a fully housed motorized lead screw with a rotating screw configuration and your choice of end machining. This version simplifies your design process by enabling you to select a product based on linear travel per motor rotation and by including anti-rotation as standard, with no external requirements for guidance.



Thomson Advantage

The Thomson Taper-Lock

Fixing the motor to the lead screw usually requires a coupling assembly (A), a counter-bore press fit (B) or a hollow shaft press fit (C). The assembly process may also entail the use of adhesives or welding, but the bottom line is that all these solutions make it difficult or impossible to change lead screws or perform maintenance. Thomson has solved this issue with our patented Taper-Lock coupling (D) that requires only a single retention fastener.



Coupling assembly
- space demanding
- requires more external components
- reduced stroke
- may reduce accuracy

Counter-bore press fit
- poor lead screw alignment
- lead screw prone to slipping and decoupling
- reduced stroke
- difficult to service lead screw

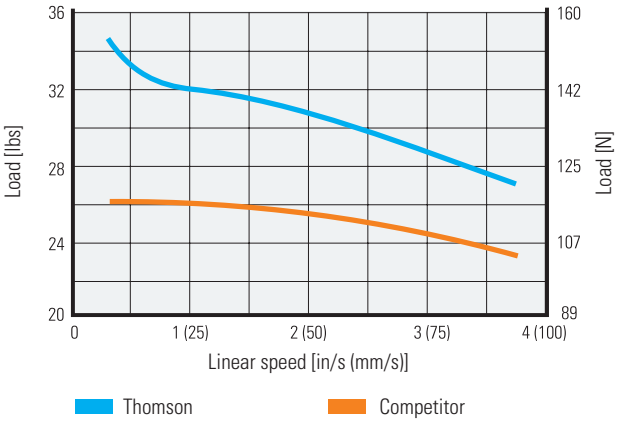
Hollow shaft press fit
- fewer compatible lead screws
- poor lead screw alignment
- lead screw prone to slipping and decoupling
- difficult to service lead screw

Thomson Taper-Lock
- increased lead screw configurability
- precise lead screw alignment
- increased stroke length
- compact form factor

Thrust Force Comparison

Thomson optimized motors will result in up to a 30% increase in thrust over the competition. That means you will get a smaller and more efficient solution with the same power output.

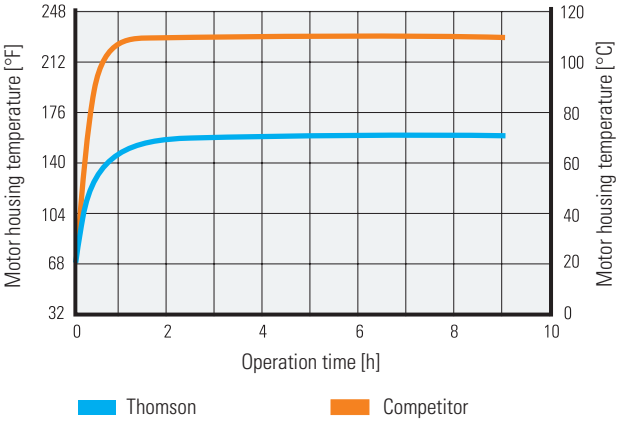
Load vs. Speed



Temperature Rise Comparison

Thomson offers more efficient motors where more torque can be output with less heat loss – meaning that our motors can be operated with higher power input while maintaining lower heat generation.

Temperature vs. Operation Time

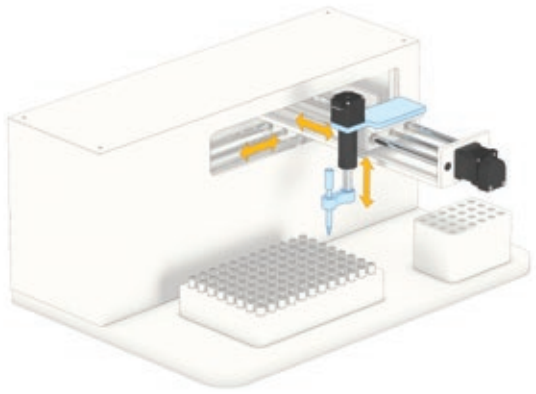


The curves where generated with a 1.5 A / 2.33 V, 1.8° NEMA 17 single stack, rotating screw stepper motor. Test ran with a 0.9°, 24 VDC chopper drive and a 4-2516 lead screw at an ambient temperature of 20 °C.

Application Examples

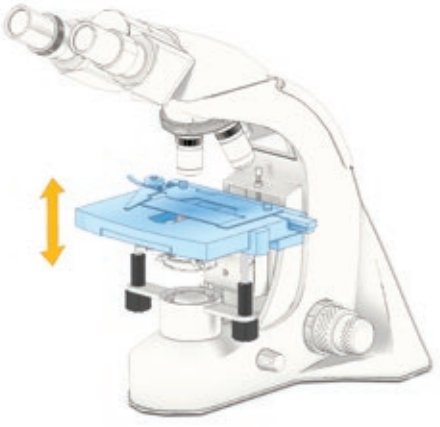
These common applications show that stepper motor linear actuators reduce the total number of components in your design, while minimizing space requirements, and making assembly and maintenance quicker and easier. Examples are shown for all three configurations - rotating screw (MLS), rotating nut (MLN) and actuator (MLA).

Pipetting MLA MLS



Tiny, precise, repeatable vertical motion is essential for accurate pipetting. Choose MLA to simplify your z-axis and MLS for precise, horizontal motion in pipetting applications.

Plate Vertical Postioning MLA

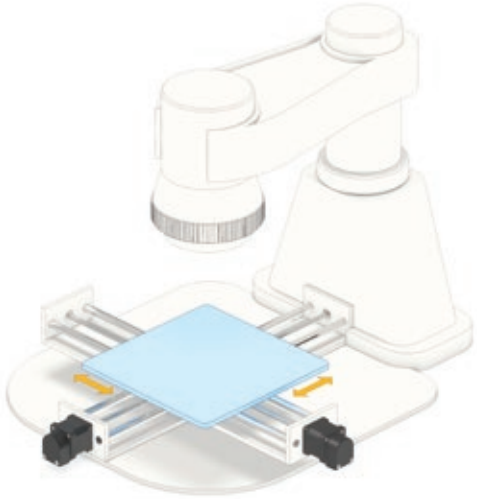


Actuator assemblies are self contained and ideal for simplified, leveling applications where small radial or moment loads may be present.

Fluid Pumps MLN MLS

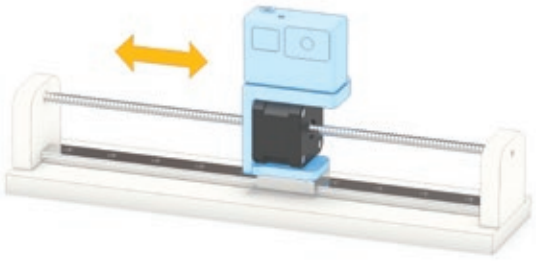
Regardless of the mounting configuration, a stepper motor linear actuator can increase pump pressure, reduce equipment footprint and more accurately dispense fluid.

XY Stages MLS



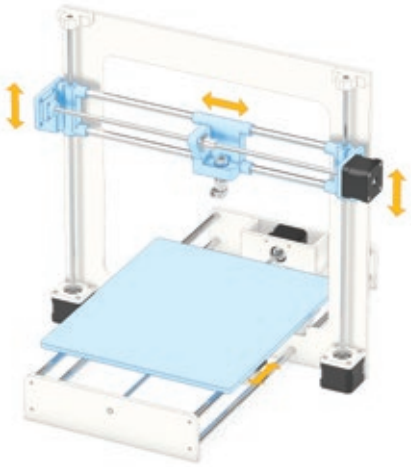
Stepper motor linear actuators optimize XY stage designs with their compactness and power.

Horizontal Positioning MLN



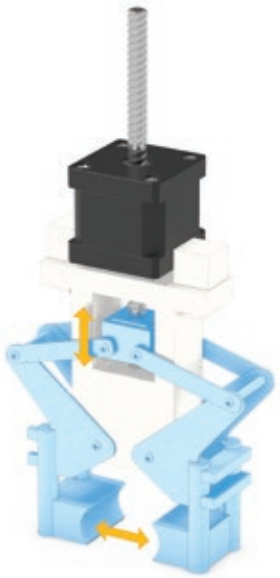
Cameras and other measurement devices need to be in just the right place at just the right time. MLN delivers reliable horizontal positioning and length selections to get your horizontal positioning job done right.

3D Printing MLS



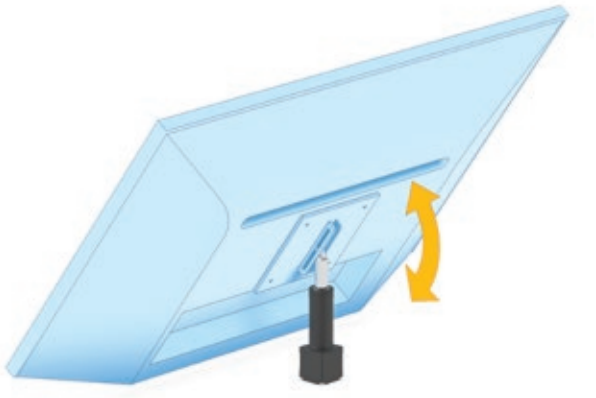
Utilizing a stepper motor linear actuator on a 3D printer can eliminate the need for couplings, bearings and supports while increasing stroke length and print volume.

Robotic Gripper MLN



MLN configurations excel in gripping applications, rotating and positioning gripper heads and attachments with ease.

Monitor Tilting MLA



Angle adjustment is made simple when the MLA configuration is applied in monitor and plate tilting applications.

Ordering Keys

MLS/MLN Ordering Key

1	2	3	4	5	6	7	8	9	10	11	12	13	14
MLS	**17**	**A**	**15**	**– 25**	**0250**	**P**	**06000**	**N**	**– B2**	**00**	**– RS**	**2**	

1. Series
MLS = Rotating screw
MLN = Rotating nut

2. Motor size[1]
08 = NEMA 08 motor used through April 2022 (MLS only)
X8 = NEMA 08 motor used after April 2022 (MLS only)
11 = NEMA 11
14 = NEMA 14
17 = NEMA 17
23 = NEMA 23

3. Motor stack[1]
A = Single
B = Double
X = Custom single[2]
Y = Custom double[2]

4. Motor current rating (in 0.1 amps)[1]
05 = 0.5 amps
08 = 0.8 amps
10 = 1.0 amps
13 = 1.3 amps
15 = 1.5 amps
19 = 1.9 amps
30 = 3.0 amps
39 = 3.9 amps

5. Screw diameter[3]
18 = 0.188 in
25 = 0.250 in
31 = 0.313 in
37 = 0.375 in
43 = 0.438 in
50 = 0.500 in
M04 = 4.0 mm
M06 = 6.0 mm
M08 = 8.0 mm
M10 = 10.0 mm
M12 = 12.0 mm

6. Linear travel/rev[3]
0031 = 0.031 in
0040 = 0.040 in
0050 = 0.050 in
0063 = 0.063 in
0079 = 0.079 in
0083 = 0.083 in
0100 = 0.100 in
0118 = 0.118 in
0125 = 0.125 in
0157 = 0.157 in
0167 = 0.167 in
0192 = 0.192 in
0200 = 0.200 in
0250 = 0.250 in
0300 = 0.300 in
0333 = 0.333 in
0375 = 0.375 in
0400 = 0.400 in
0500 = 0.500 in
0750 = 0.750 in
0800 = 0.800 in
1000 = 1.000 in
1200 = 1.200 in
1500 = 1.500 in
010 = 1.0 mm
020 = 2.0 mm
030 = 3.0 mm
040 = 4.0 mm
050 = 5.0 mm
060 = 6.0 mm
080 = 8.0 mm
100 = 10.0 mm
120 = 12.0 mm
150 = 15.0 mm
160 = 16.0 mm
180 = 18.0 mm
200 = 20.0 mm
250 = 25.0 mm

7. Accuracy grade
S = Standard 0.010 in/ft (250 µm/300 mm)
P = Precision 0.003 in/ft (75 µm/300 mm)

8. Lead screw overall length[1,2]
0X000 = X.000 in (ex: 06000 = 6.000 in)
XXX00 = XXX.00 mm (when metric diameter is selected, ex: 15000 = 150.00 mm)

9. Lead screw coating
N = No coating on lead screw
T = PTFE-coated lead screw[4]

10. Front-end machining[5]
A0 = No machining
Plain journal ends:
B1 = Ø 2.50 mm h7
B2 = Ø 4.00 mm h7
B3 = Ø 5.00 mm h7
B4 = Ø 6.00 mm h7
BX = Custom journal end machining[2]
Male threaded ends:
C1 = #4-40 x 0.250 in
C2 = #8-32 x 0.250 in
C3 = #10-24 x 0.375 in
C4 = 1/4-20 x 0.500 in
C5 = M2.5x0.45 x 6.35 mm
C6 = M4x0.7 x 6.35 mm
C7 = M5x0.8 x 9.53 mm
C8 = M6x1.0 x 12.70 mm
CX = Custom threaded end[1]
Journal with snap ring groove:
D1 = Ø 2.50 mm and ring groove
D2 = Ø 4.00 mm and ring groove
D3 = Ø 5.00 mm and ring groove
D4 = Ø 6.00 mm and ring groove
DX = Custom journal with snap ring groove[1]

11. Rear-end machining[5]
MLN same options as front-end
MLS is always 00
XX = Other custom end machining[2]

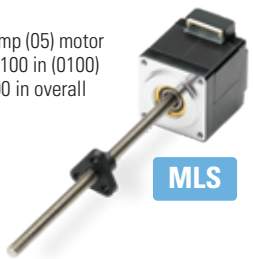
12. Nut. MLN is always XX[6]
XX = No nut or MLN
RS = Flange mount, acetal material (RSF Series nuts)
AF = Flange mount, alternative anti-backlash (AFT Series nuts)
BN = Threaded mount, bronze material (BN Series nuts)
MT = Flange mount, alternative to RS nut (MTS Series nuts)
RH = Flange mount, peek material (RSFH Series nuts)
SB = Thread mount, alternative anti-backlash (SNAB Series nuts)
SN = Threaded mount, acetal material (SN Series nuts)
XF = Triangular flange, anti-backlash (XC Series nuts)
XT = Threaded mount, anti-backlash (XC Series nuts)

13. Nut size. MLN is always X[6]
X = No nut or MLN
1 = 0.188 in and 4 mm dia screws[7]
2 = 0.250 in and 6 mm dia screws[8, 9]
3 = 0.313 in, 0.375 in, 8 and 10 mm screws
5 = 0.438 in, 0.50 in and 12 mm screws

14. Custom designation[2]
(blank) = Standard configuration
001-999 = Custom configuration

1. For available standard motors, see pages 17-32.
2. To be assigned by Thomson only.
3. For compatible lead screws, see pages 12-13.
4. PTFE coating not available for MLN configurations or with RH (RSFH) lead nuts.
5. For compatible end-machining options, see page 15.
6. RS nut standard on MLS. For optional nut compatibility, see pages 36-37.
7. XF1 and XT1 nut also compatible for 0.250 in and 6 mm diameter lead screws
8. SN2 nut used for 0.188 in diameter lead screws and SB2 nut used for 0.188 in and 4 mm diameter lead screws
9. MT2 nut used for 0.188 in, 4 mm, 0.250 in, 6 mm, 0.313 in, and 8 mm diameter lead screws

MLS Example:
MLS11A05-180100S04000T-A000-RS1
MLS = Rotating screw (S) configuration
11A05 = NEMA 11 (11), single stack (A), 0.51 amp (05) motor
1801000S04000T = 0.1875 in (18) diameter x 0.100 in (0100) lead screw, standard grade accuracy (S) at 4.000 in overall length (04000) with PTFE screw coating (T)
A000 = No (A0) and MLS default N/A (00) end-machining on screw
RS1 = RSF1800 lead nut



MLN Example:
MLN17B15-M06120P15000N-A0C6-XXX
MLN = Rotating nut (N) configuration
17B15 = NEMA 17 (17), double stack (B), 1.50 amp (15) motor
M06120P15000N = 6 mm (M06) diameter x 12.0 mm (120) lead screw, precision grade accuracy (P) at 150 mm overall length (15000) with no screw coating (N)
A0C6 = No (A0) and M4x0.7 threaded end x 6.35 mm length (C6) end-machining on screw
XXX = no nut (required for MLN / rotating nut assemblies)

X8 = NEMA 08 motor used after April 2022
11 = NEMA 11
14 = NEMA 14
17 = NEMA 17
23 = NEMA 23

3. Motor stack[1]
A = Single
B = Double
X = Custom single[2]
Y = Custom double[2]

4. Motor Current Rating (in 0.1 amps)[1]
05 = 0.5 amps
08 = 0.8 amps
10 = 1.0 amps
13 = 1.3 amps
15 = 1.5 amps
19 = 1.9 amps
30 = 3.0 amps
39 = 3.9 amps

1. For available standard motors, see pages 17-32.
2. To be assigned by Thomson only.
3. For compatible linear travel/rev, see pages 12-13.
4. For more details on mounting options, see page 16.

5. Linear travel/rev (lead in 0.001 inch)[3]
0031 = 0.031 in
0039 = 0.039 in (1 mm)
0040 = 0.040 in
0050 = 0.050 in
0063 = 0.063 in
0079 = 0.079 in (2 mm)
0083 = 0.083 in
0100 = 0.100 in
0118 = 0.118 in (3 mm)
0125 = 0.125 in
0157 = 0.157 in (4 mm)
0167 = 0.167 in
0192 = 0.192 in
0197 = 0.197 in (5 mm)
0200 = 0.200 in
0236 = 0.236 in (6 mm)
0250 = 0.250 in
0300 = 0.300 in
0315 = 0.315 in (8 mm)
0333 = 0.333 in
0375 = 0.375 in
0394 = 0.394 in (10 mm)
0400 = 0.400 in
0472 = 0.472 in (12 mm)
0500 = 0.500 in
0709 = 0.709 in (18 mm)
0750 = 0.750 in
0787 = 0.787 in (20 mm)
1000 = 1.000 in
1200 = 1.200 in

6. Accuracy Grade
S = Standard 0.010 in/ft (250 µm/300 mm)
P = Precision 0.003 in/ft (75 µm/300 mm)

7. Stroke length (in 0.01 inch)
0XXX = X.XX in stroke length (always in inch)
(ex: 0150 = 1.50 in stroke. Max stroke length = 1.50 in for MLA08 and 2.50 in for all others)

8. End-mounting[4]
ML08:
C1 = #4-40 x 0.236 in male
E1 = #4-40 x 0.236 in female
C4 = M3x0.5 x 5.99 mm male
E4 = M3x0.5 x 5.99 mm female

ML1x:
C2 = #8-32 x 0.265 in male
E2 = #8-32 x 0.265 in female
C5 = M4x0.7 x 6.73 mm male
E5 = M4x0.7 x 6.73 mm female

ML23:
C3 = 1/4-20 x 0.500 in male
E3 = 1/4-20 x 0.500 in female
C6 = M6x1.0 x 12.70 mm male
E6 = M6x1.0 x 12.70 mm female

9. Nut
S01 = For ML08
S02 = For ML1x
S03 = For ML23

10. Custom designation[2]
(blank) = Standard configuration
001-999 = Custom configuration

MLA Example:
MLA14A08-0472S0175-E5-S02
MLA = Actuator (A) configuration
14A08 = NEMA 14 (14), single stack (A), 0.88 amp (08) motor
0472S0175 = 0.472 in lead (0472), standard grade accuracy (S) at 1.75 in stroke (0175)
E5 = Standard M4x0.7 female threaded end
S02 = Standard nut for size 11, 14, and 17 configurations

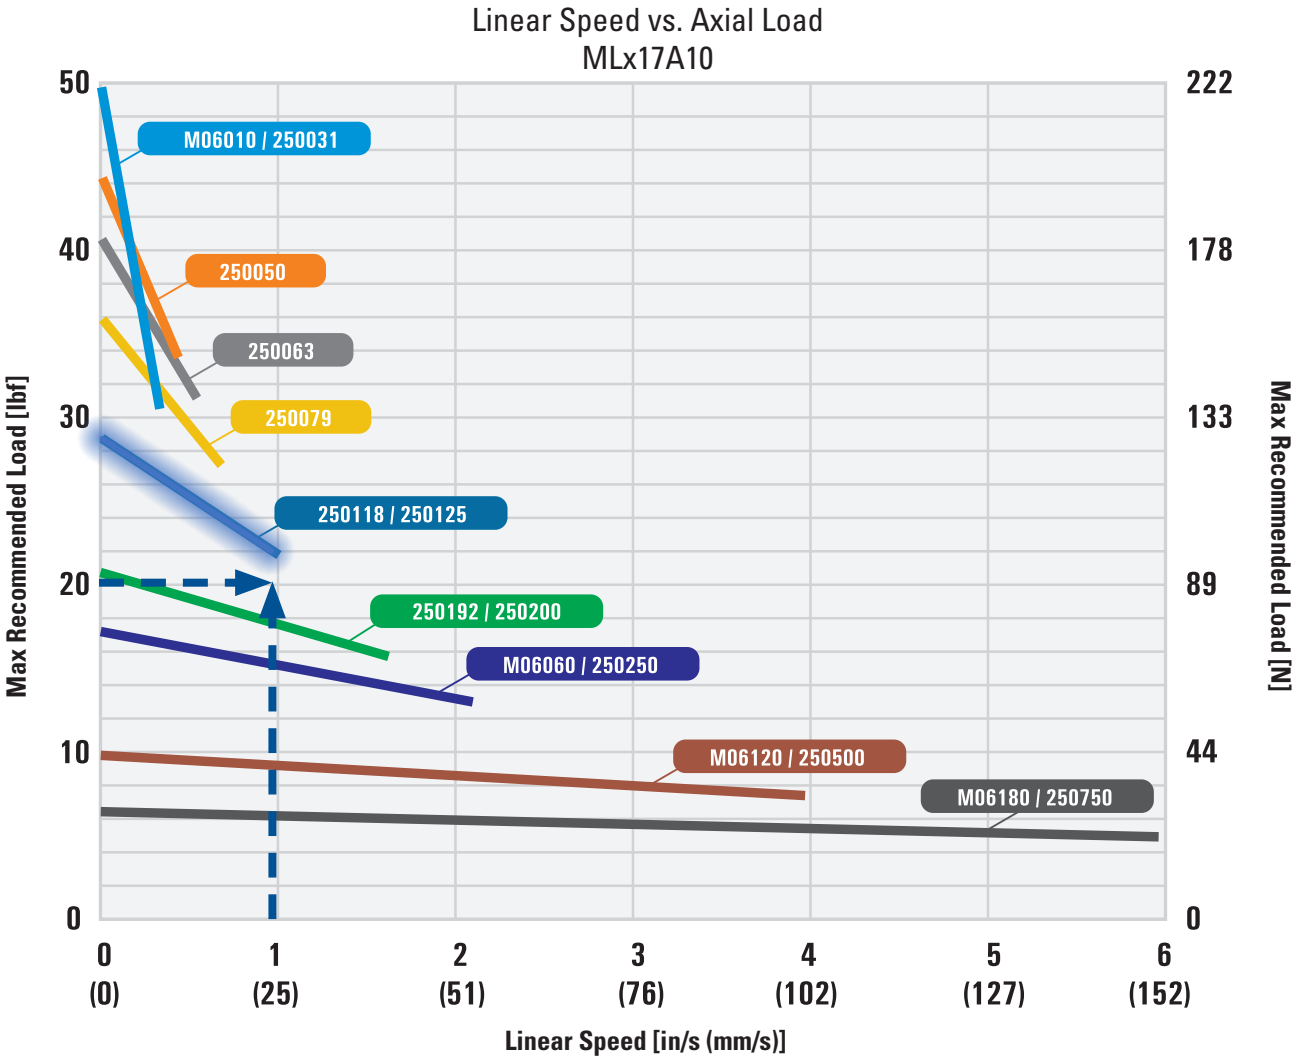
Sizing and Selection Guidelines

How to Select Motor and Lead Screw

For a basic sizing determination, use the motor performance charts throughout the brochure to select the appropriate lead screw based on your load and speed requirements.

Example:
Required Force = 20 lbf (89 N)
Required Speed = 1 in/s (25 mm/s)



Given the force and speed requirements of 20 lbf and 1 in/s, respectively, the ideal screw is a 250118 or 250125 with this motor.

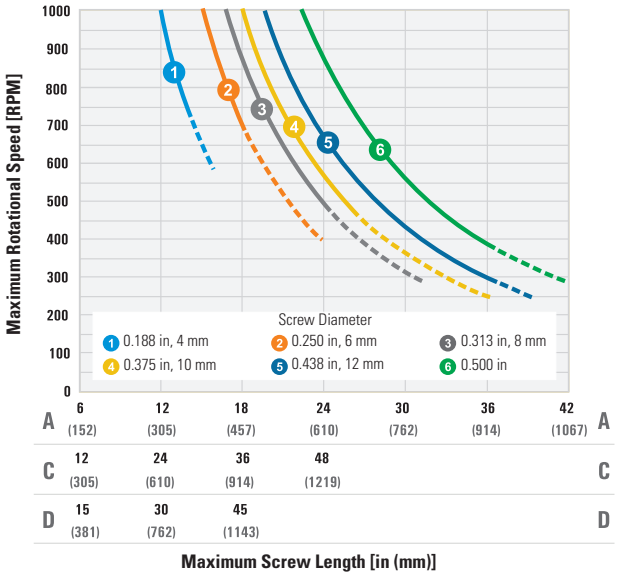
Note: Simplified performance diagrams are theoretical only and assume ideal conditions with a 24 VDC power supply, standard material lead nut and a moderate length, non-lubricated lead screw. Higher loads and speeds can be achieved. For more detailed performance plots and sizing tools, please visit www.thomsonlinear.com/en/products/motorized-lead-screws.

Sizing and Selection Guidelines

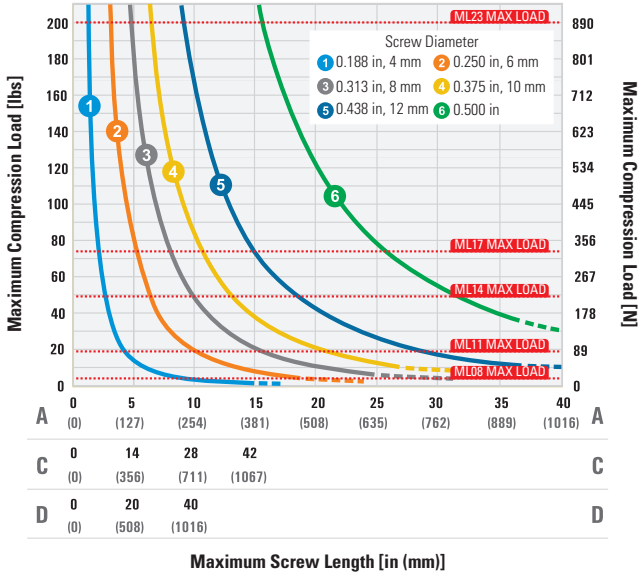
How to Determine Maximum Permissible Screw Length

For MLS and MLN configurations, in order to determine the maximum possible lead screw length for your stepper motor linear actuator assembly, the following charts can be used. These charts take in to consideration the maximum rotational speed and compression load as well as the end fixity of your system.

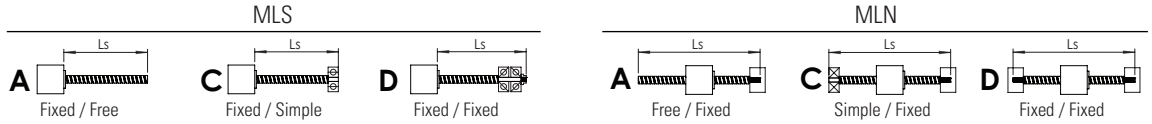
Critical Speed
Motor Speed vs. Maximum Screw Length



Column Load
Compression Force vs. Maximum Screw Length



Types of Screw End Fixity



1. Determine Maximum Motor Speed

Calculate what the maximum motor speed will be for your specific application.

2. Decide Type of Screw End Fixity

There are three basic types of end fixity (A, C and D). The maximum screw length (Ls) for a given motor speed, unit size and screw diameter will vary depending on the selection. For rotating screw assemblies, the end of the lead screw attached to the motor is considered fixed.

3. Check Critical Screw Speed

Check Critical Speed diagram for your maximum speed, lead screw diameter and end fixity to determine the maximum permissible screw length for your application.

4. Check Column Loading

Another limiting factor for the screw length is how sensitive it is to column loading and how likely it is to buckle under a compression load. Check the Column Load diagram to see that your load and desired maximum screw length are compatible with regards to the unit size, lead screw diameter and end fixity being used.

1. Some leads may not be available in high-performance nut material or some anti-backlash nuts. Contact Thomson for more detail.
2. Lead designations for MLA are shown in parenthesis.
3. Lead screw not available in precision grade accuracy (P).

Note: Not all available lead screws are shown above. Please contact Thomson for more details.

Specifications

Basic Specifications

Lead Screw

Material		300 Series Stainless Steel				
Standard Coating[1]		None				
Standard Lead Accuracy	[in./ft. (µm/300 mm)]	0.010 (250)				
Precision Lead Accuracy	[in./ft. (µm/300 mm)]	0.003 (75)				
Straightness	[in./ft. (µm/300 mm)]	0.005 (125)				

Lead Nut

Standard Material		Internally lubricated acetal (POM)				
High Performance Material		Internally lubricated PEEK				
Nut Efficiency[2]	[%]	Up to 85				
Typical Linear Travel Life	[in. (km)]	5×10^6 (125)				
Positional Repeatability with Standard Nut[3]	[in. (mm)]	0.005 to 0.010 (0.127 to 0.254)				
Positional Repeatability with Anti-Backlash Nut[4]	[in. (mm)]	<0.002 (0.051)				

Motor

Frame Size		NEMA 8	NEMA 11	NEMA 14	NEMA 17	NEMA 23
Step Size	[°]	1.8	1.8	1.8	1.8	1.8
Max. Axial Load[5]	[lbs. (N)]	5 (22)	20 (89)	50 (222)	75 (334)	200 (890)
Axial Pre-Load[6]	[lbs. (N)]	5 (22)	20 (89)	30 (133)	40 (178)	40 (178)
Concentricity of Mounting Pilot to Shaft	[in. (mm)]	0.003 (0.08) TIR				
Perpendicularity of Shaft to Mounting Face	[in. (mm)]	0.003 (0.08) TIR				
Max. Case Temperature	[°F (°C)]	140 (60)		176 (80)		
Storage Temperature	[°F (°C)]	-4 to 122 (-20 to 50)				
Ambient Temperature	[°F (°C)]	-4 to 122 (-20 to 50)				
Max. Humidity (non-condensing)	[%]	85				
Magnet Wire Insulation		Class B 130 °C (266 °F)				
Insulation Resistance		100 Mohm @ 500 VDC				
Dielectric Strength		500 VAC for 1 minute				

Assembly

Max. Backlash with Standard Nut[7]	[in. (mm)]	0.010 (0.25)				
Max. Backlash with XC Anti-Backlash Nut	[in. (mm)]	0 (0)				
Max Lead Screw Runout[9]	[in. (mm)]	0.010 (250)				
Operating Temperature	[°F (°C)]	15 to 125 (-10 to 50)				
MLA Max Side Load[8]	[% of axial load]	10				
MLA Extension Tube Max Total Rotational Play	[+/- degrees]	3				

1. Contact Thomson for optional lead screw coatings.
2. Depending on lead, nut material and lubrication.
3. Depends on nut, load and orientation.
4. For best positional repeatability, load should be kept well below design load of nut.
5. Max. axial load based on a L10 life of 10000 hours of continuous motion at speeds of 100 to 300 RPM.
6. Can be adjusted based on application requirements. If axial load exceeds pre-load of motor, motor shaft may deflect up to 0.003 in. (0.08 mm) for configurations with axial load pulling away from motor face.
7. Nut fit can be adjusted depending on backlash requirements.
8. Max radial load on MLA assemblies depends on load orientation, speed, stroke and other factors. For optimal performance, side loads should be avoided at end of travel. Contact Thomson for application assistance.
9. Assemblies with lead screws exceeding max recommended length may have a higher runout.

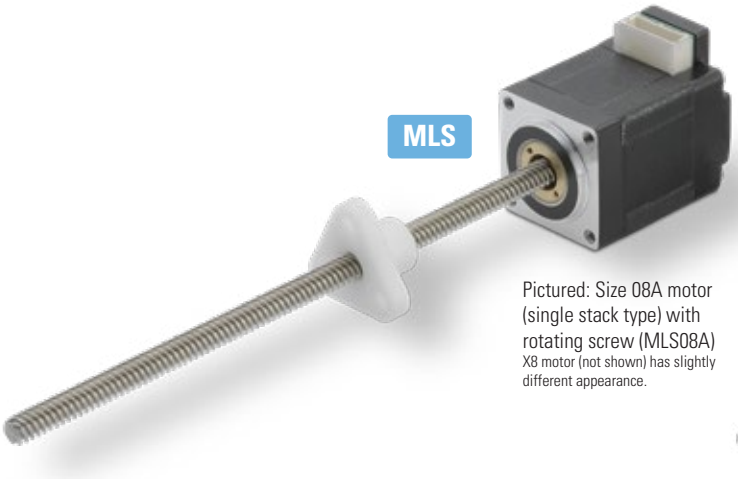
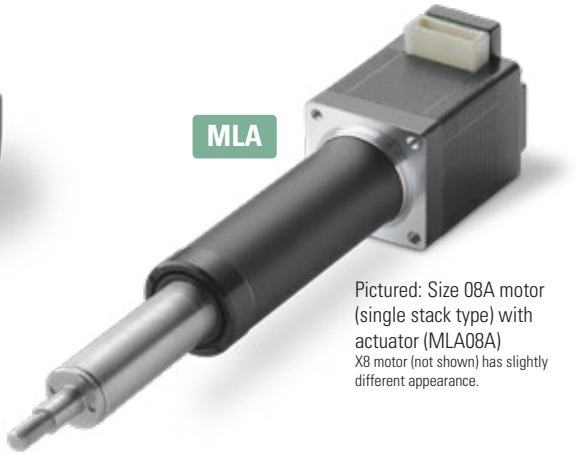
Contact Thomson for custom end-machining options.

Specifications – MLx08, MLxX8 Motor Size



Pictured: Size 08A motor (single stack type) with rotating screw (MLS08A)
X8 motor (not shown) has slightly different appearance.



Pictured: Size 08A motor (single stack type) with actuator (MLA08A)
X8 motor (not shown) has slightly different appearance.

Features and Benefits

- NEMA 8 motor (size 21 mm)
- Available in rotating screw (MLS) and actuator (MLA) configurations
- Choose between a variety of inch and metric leads
- Recommended max. thrust force 5 lbs. (22 N). See performance plots for actual load limits
- Recommended max. lead screw length of 4 in. (102 mm) for MLS and 1.5 in. (38 mm) stroke for MLA.
- Side load capacity of up to 10% of axial load for MLA configurations.[1]

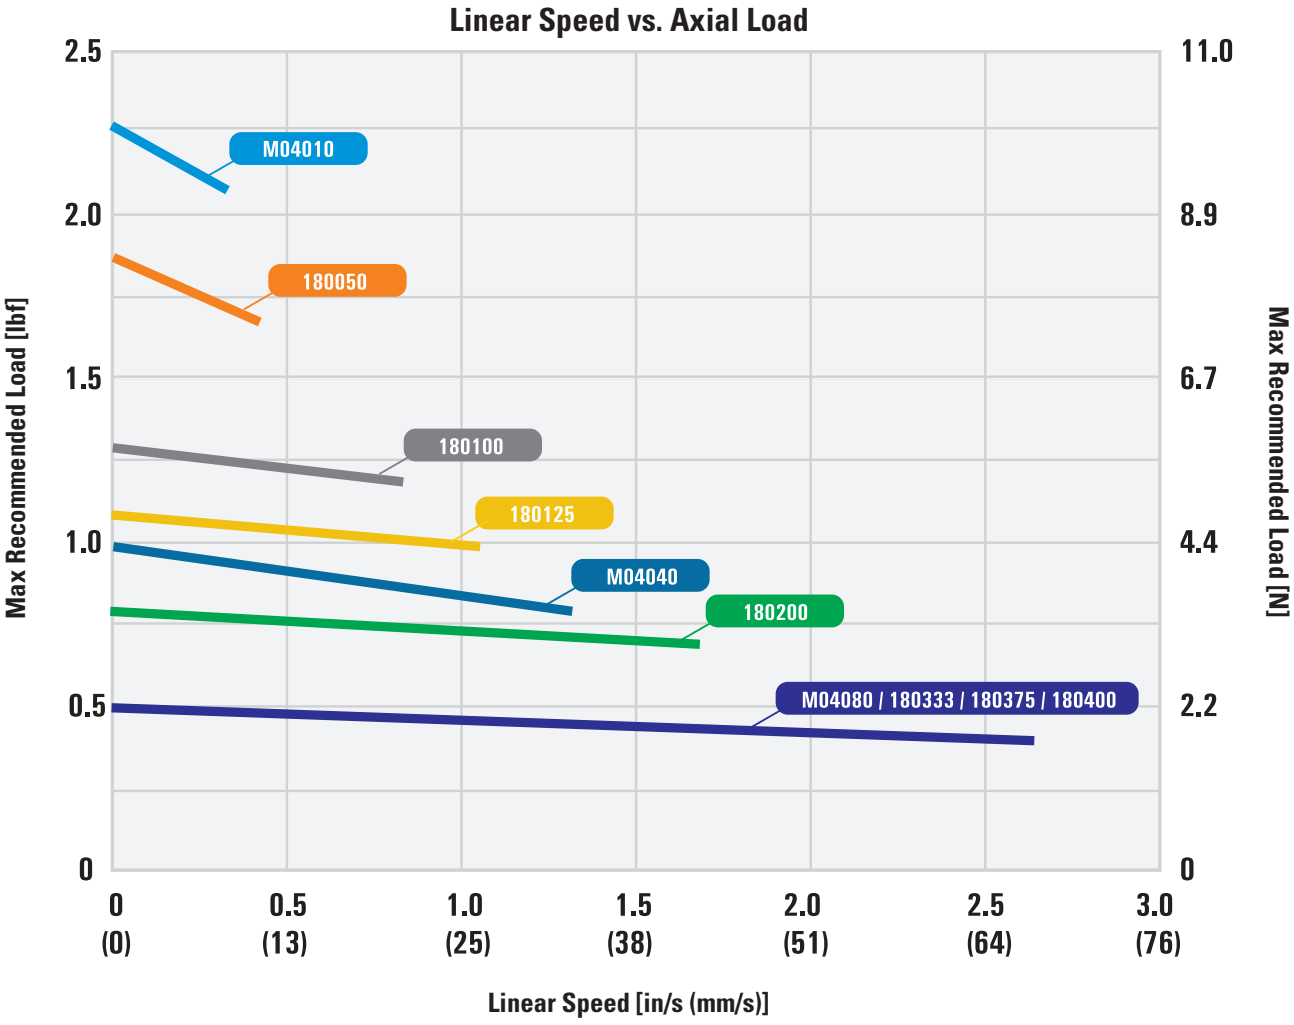
2. RSF1800 (RS1) lead nut shown. For other nut options, see Nut Selection table on pages 36-37.
3. Standard M3x0.5 male end mounting (C4) shown. For other end mount options, see page 16.
4. Max stroke length for MLA08 configurations is 1.5 in. (38 mm). End of travel collisions should be avoided. Contact Thomson for additional stroke lengths.
5. Cover tube length (L) = stroke (S) + 0.76 in. (19.3 mm).
6. Extension tube total max rotational play = +/- 3 degrees. Fit can be modified. Contact Thomson for more details.

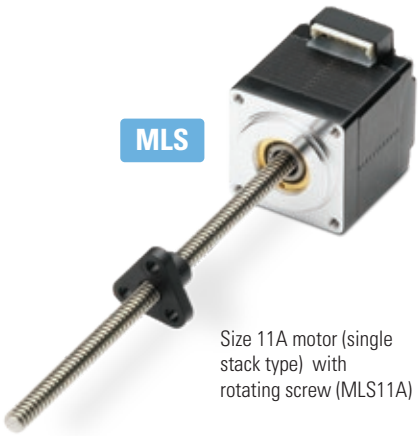
MLx08 – Performance Diagrams

MLx08A05



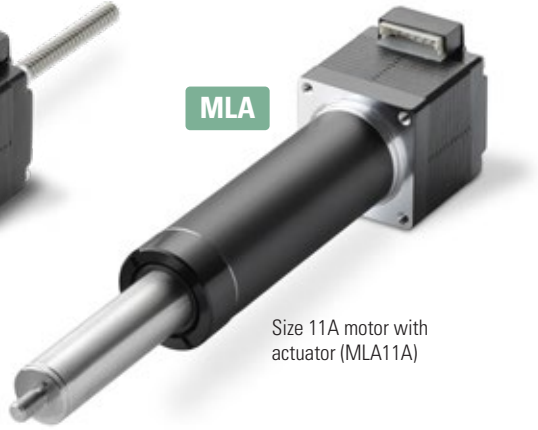
Note: Simplified performance diagrams are theoretical only and assume ideal conditions with a 24 VDC power supply, standard material lead nut and a moderate length, non-lubricated lead screw. Higher loads and speeds can be achieved. For more detailed performance plots and sizing tools, please visit www.thomsonlinear.com/en/products/motorized-lead-screws.

Specifications – MLx11 Motor Size



Size 11A motor (single stack type) with rotating screw (MLS11A)

Size 11A motor with rotating nut (MLN11A)



Size 11A motor with actuator (MLA11A)

Features and Benefits

- NEMA 11 motor (size 28 mm).
- Choose between a variety of inch and metric lead screws
- Recommended max. thrust force 20 lbs. (89 N).
- Recommended max. lead screw length of 4 in. (102 mm) for MLS / MLN and 2.5 in. (64 mm) stroke for MLA.
- Side load capacity of up to 10% of axial load for MLA configurations.
- MLS and MLA configurations are encoder ready. See pages 40-41 for more details.

Inch [mm]	

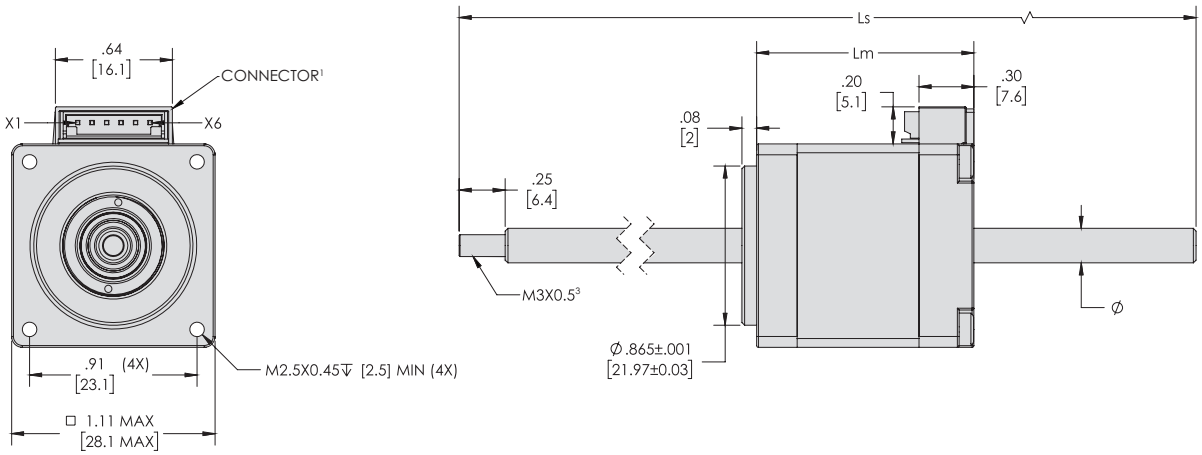
MLN Configuration



MLA Configuration

1. RSF2500 (RS2) lead nut shown. For additional nut options, see Nut Selection table on pages 36-37.
2. Motor comes standard with flying leads. For wiring diagram details, see page 45.
3. Standard M4x0.7 male threaded end machining shown. For additional end machining options, see page 15.
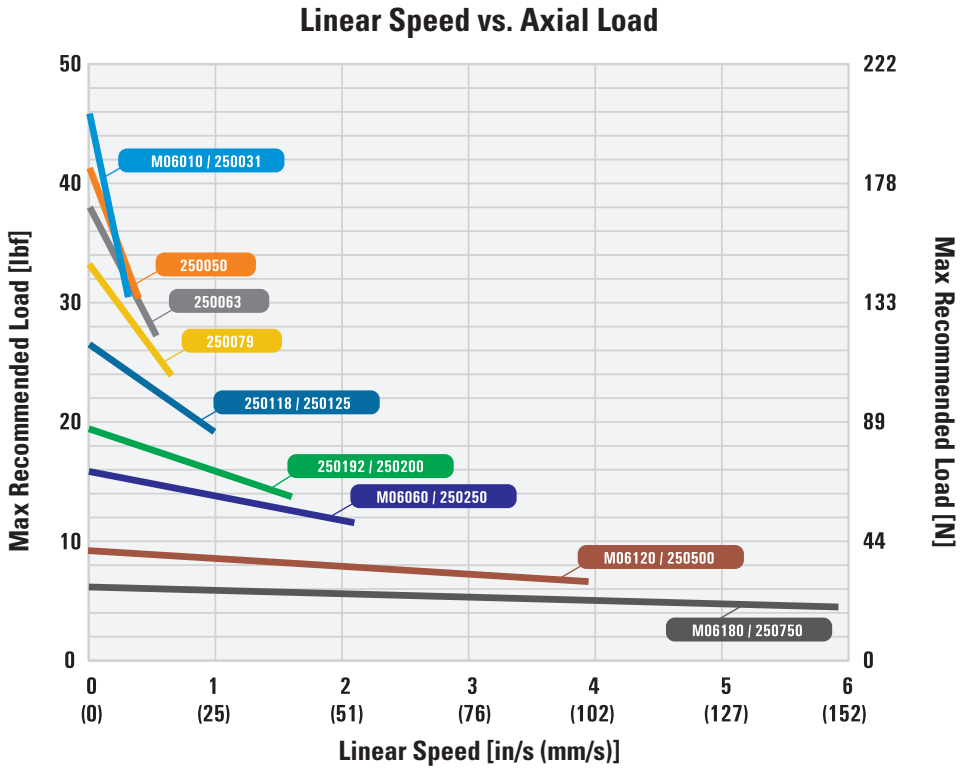
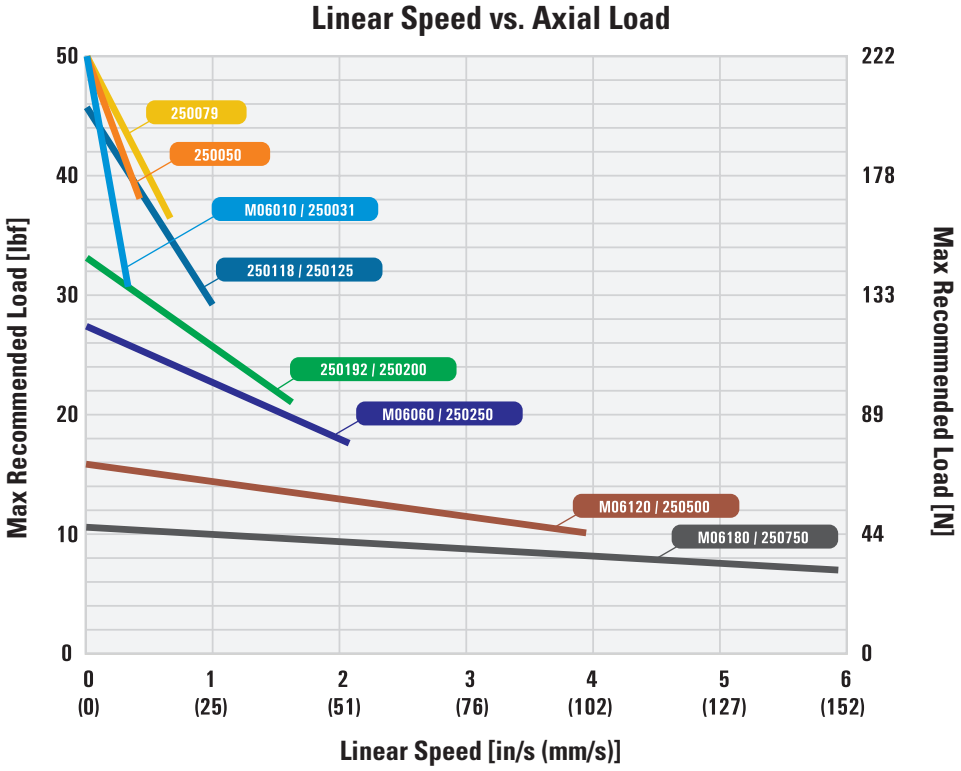
4. Standard M4x0.7 male end mounting (C5) shown. For additional end mounting options, see page 16.
5. Max stroke length for MLA17 configurations is 2.5 in. (64 mm). End of travel collisions should be avoided. Contact Thomson for additional stroke lengths.
6. Cover tube length (L) = stroke (S) + 1.16 in. (29.5 mm).
7. Extension tube total max rotational play = +/-3 degrees. Fit can be modified. Contact Thomson for more details.

ML17 – Performance Diagrams

MLx17A10



MLx17B10



Note: Simplified performance diagrams are theoretical only and assume ideal conditions with a 24 VDC power supply, standard material lead nut and a moderate length, non-lubricated lead screw. Higher loads and speeds can be achieved. For more detailed performance plots and sizing tools, please visit www.thomsonlinear.com/en/products/motorized-lead-screws.

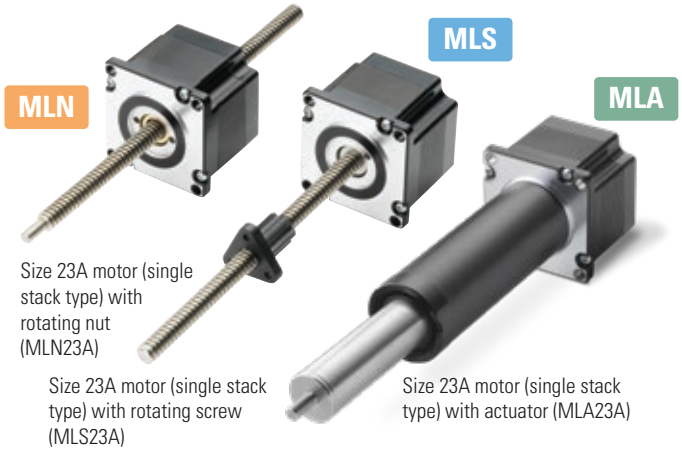
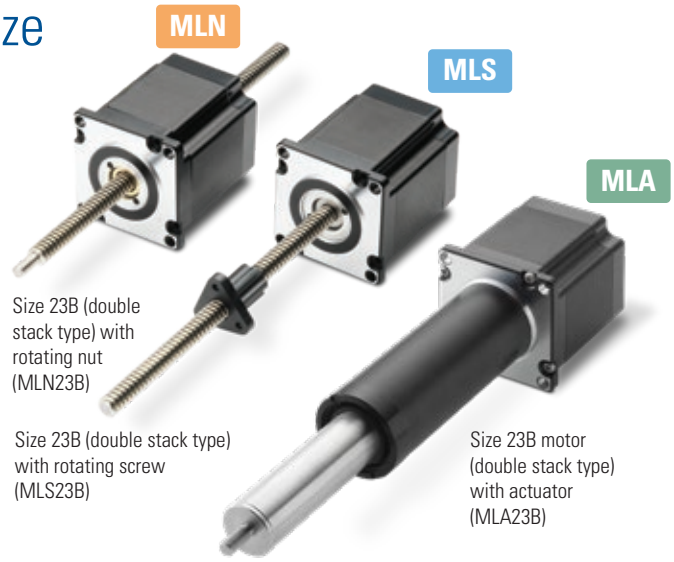
Specifications – MLx23 Motor Size



Size 23A motor (single stack type) with rotating nut (MLN23A)

Size 23A motor (single stack type) with rotating screw (MLS23A)

Size 23A motor (single stack type) with actuator (MLA23A)



Size 23B (double stack type) with rotating nut (MLN23B)

Size 23B (double stack type) with rotating screw (MLS23B)

Size 23B motor (double stack type) with actuator (MLA23B)

Features and Benefits

- NEMA 23 motor (size 57 mm).
- Choose between a variety of inch and metric lead screws.
- Recommended max. thrust force 200 lbs. (890 N).
- Recommended max. stroke length for MLA is 2.5 in. (64 mm).
- Side load capacity of up to 10% of axial load for MLA configurations.
- For MLS/MLN, recommended max. lead screw length for 0.313 in. (8 mm) diameter is 12 in. (305 mm) / max. lead screw length for 0.375 in. (10 mm) diameter is 16 in. (406 mm).
- MLS and MLA configurations are encoder ready. See pages 40-41 for more details.

1. Three-digit reference to be used within the full MLS part number.
2. Approximate max running load assuming 500 RPM and 50% duty cycle. For more detailed design limitations and sizing, contact Thomson.
3. Some high-lead configurations are not available for the XC nut.
4. Preload force is lower than stated design load. Exceeding preload force will cause spring to fully compress, and nut will lose anti-backlash properties. Preload force values: SNAB1800/SNAB2500 = 1-3 lbs, SNAB3100/3700 = 2-5 lbs, and SNAB5000 = 4-9 lbs.

Specifications – Encoders

Pictured: MLS23B motor with E3 encoder

Features and Benefits

- All MLS and MLA configurations are available with rear-mounted optical encoders (except for size 8)
- Two channel quadrature square wave outputs with optional third channel index output
- Various cycles per revolution (CPR) or pulses per revolution (PPR) available – from 32 to 10,000 CPR or 128 to 40,000 PPR

Available Encoder Configurations

Encoder Model	CPR	Index	Output	Compatible Motors
E2	32[1], 50, 96, 100, 120[1], 192, 200, 250, 256, 360, 400, 500, 512, 540, 720, 900, 1000, 1024, 1250, 2000[2], 2048[2], 2500[2], 4000[2], 4096[2], 5000[2]	Index or Non-Index	Single-Ended	11, 14, 17

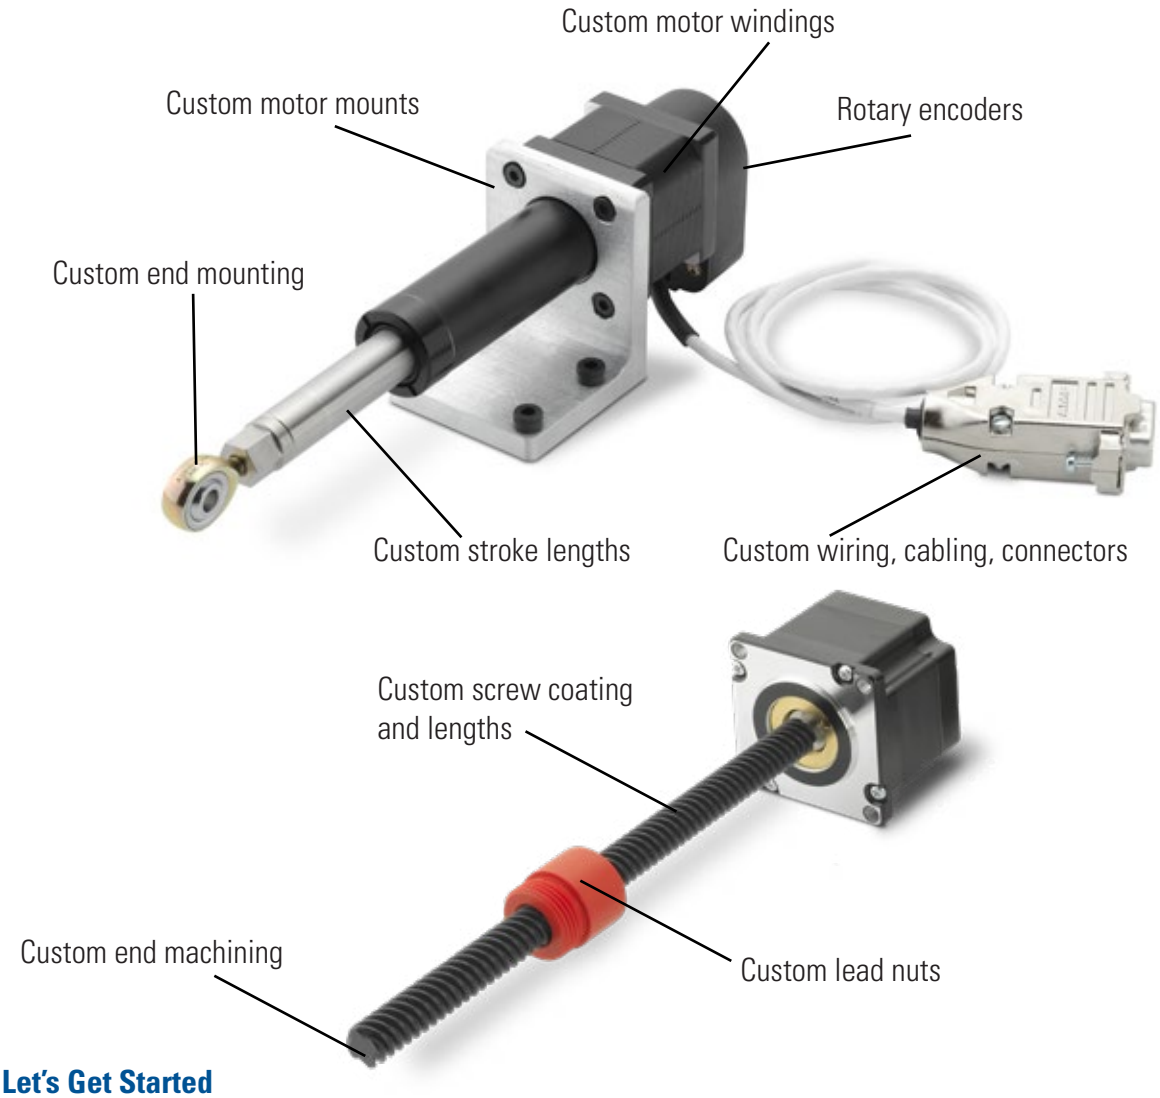
Make it Yours By Customizing a Stepper Motor Linear Actuator

Thomson routinely collaborates with original equipment manufacturers globally to solve problems, boost efficiency and enhance the value passed on to their customers. Our technology and application experience can be harnessed to help you go beyond standard products to fit the exact needs on your next product.

Below you'll see an example of some common customizations for stepper motor linear actuator products. See next page for details on each option.



Let's Get Started

Call today and let's talk about how our vast offering of standard, modified standard and custom solutions can deliver the optimal balance of performance, life and installed cost for you. Global contact information is available at www.thomsonlinear.com/cs.

Custom lead screw end machining and MLA end mounting

Thomson standard end machining and end mounting offerings serve a wide variety of needs and applications. We can also accommodate special requests, including:

- Male or female threaded ends to your specified thread and pitch
- Custom-machined journals and ring groove
- Hex or square ends
- Keyways and cross holes
- Most custom end-machining and end-mounting options can be accommodated. Contact Thomson with a drawing to get started.

Custom lead nuts

For MLS configurations, Thomson can create a custom lead nut to your specifications. Simply contact us with a drawing, and we will work to meet your needs.

Custom motor mounts

A custom mount can provide increased design flexibility with regards to motor mounting in your assembly. Contact us if you'd like a special flange solution, and we'll work to create a mount to your exact dimensional requirements.

Rotary encoders

Applications often require extra information in the form of encoder feedback. Thomson has experience integrating encoders into our stepper motor linear actuator assemblies, and our selection delivers real-time information about position, speed and direction. Encoders can be seamlessly pre-assembled onto the backs of motors on Thomson ML products.

Custom wiring, cabling and connectors

To optimize integration of our motors in your assembly, Thomson offers custom connection methods, including:

- Flying wire leads or custom connectors
- Twisting wire leads to your specification
- Heat shrink or expandable tubing
- Custom cable housings
- Contact Thomson with your custom wiring requirements

Custom lead screw and MLA stroke lengths

Depending on the configuration, Thomson can provide a wide variety of lead screw and stroke lengths. For recommend maximums, see individual motor sections. For anything outside of these ranges, contact Thomson.

Screw coating

On MLS configurations requiring dry and maintenance-free lubrication, Thomson can offer PTFE coating.

Less common applications (MLA)

Consult Thomson engineering for assistance in any applications with the following characteristics:

- Motor speeds >500 rpm
- Side loads >10% and/or side loads at fully extended position for MLA configurations
- Vertically oriented configurations with a high load and lead
- Zero tolerance of grease leaking out of front seal in MLA configurations

Product Selection Overview

The successful integration of a stepper motor linear actuator in an application is primarily dependent on the screw alignment and subsequent screw runout. If incorrectly mounted, a lead screw assembly will have significantly reduced system life and may be noisy or inaccurate. Thomson methodically straightens all screws prior to assembly to minimize vibration and runout. The Taper-Lock coupling method also was designed to provide a concentric interface and optimize alignment. Proper alignment, end support configuration and lead nut selection are important factors to achieve a well designed installation that will exceed expectations.

1. Select Stepper Motor Linear Actuator Configuration

Determine which of the configurations – rotating screw (MLS), rotating nut (MLN) or actuator (MLA) – the application requires. See pages 6-7 for application examples.

2. Select Motor Size

Select the appropriate size based on desired performance, motor frame size, etc. Thomson offers five base models (MLx08, MLx11, MLx14, MLx17 and MLx23) in various motor windings, linear travels and load capacities.

3. Select Lead Screw Configuration and End Machining or End Mounting

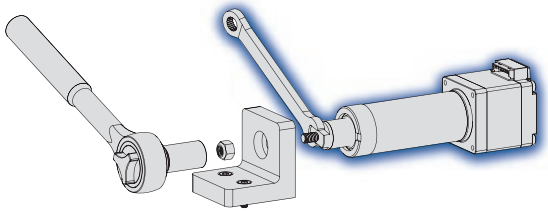
For MLS or MLN, select the lead screw diameter and length with regard to the required stroke of the application and the type of end machining the screw requires. For MLA, select desired lead or travel per step, stroke length and end mounting.

4. Select Nut

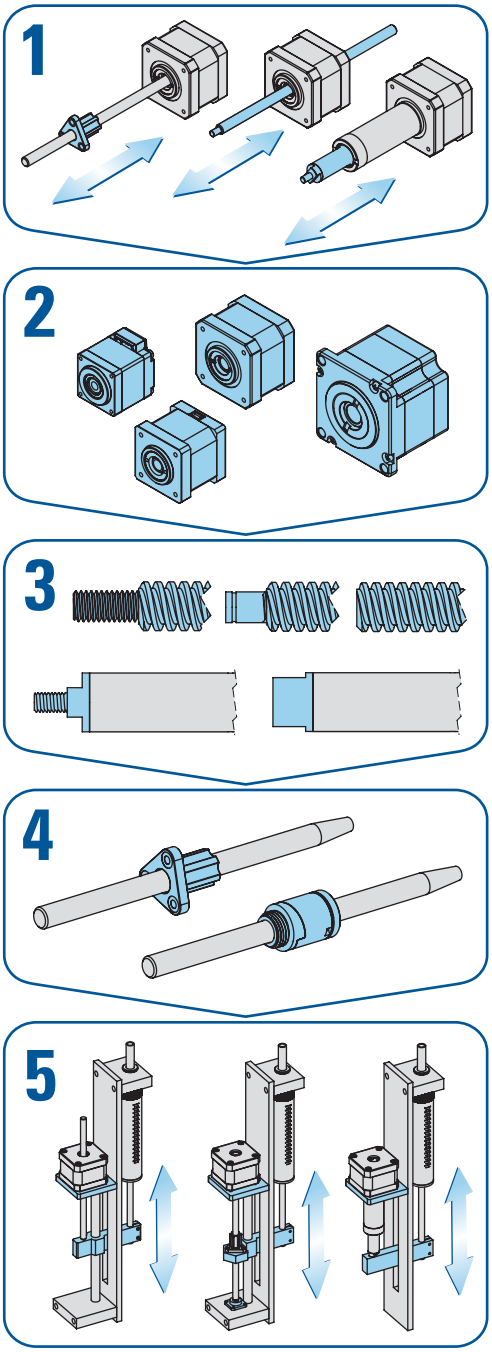
For rotating screw (MLS) configurations, choose between various nut mounting styles, materials, and backlash options. Rotating nut (MLN) configurations as default always come in a high performance material, standard backlash nut. As a default, all MLA configurations come with a standard backlash and performance material nut.

5. Mount the Stepper Motor Linear Actuator

Mount the unit into your assembly. For MLA, use the end mounting installation guidelines shown below.

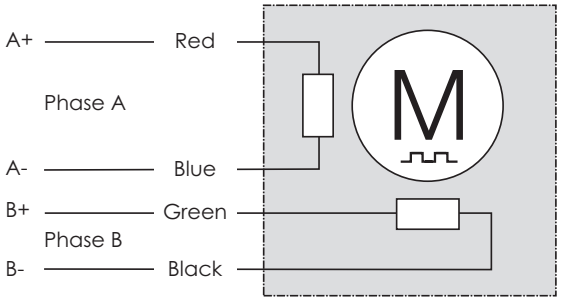


When installing your load to the end mount of an MLA assembly, always use the dedicated flats to prevent over-torquing and damaging the actuator's internal components.

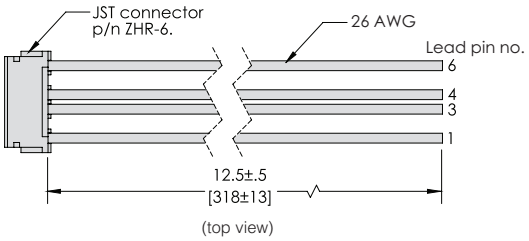


Wiring and Connectors

Thomson offers standard wiring and connector pin-outs (shown below). However, if you have unique application requirements such as a specific mating connector you'd like to easily plug into, we also offer custom wiring and connectors to match your needs. Just contact us with your request, and we'll find a solution.

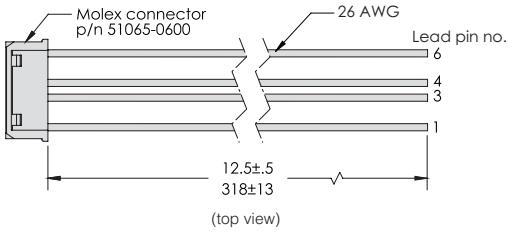


MLx08



Pin	Phase	Color
1	A+	Red
2	NA	NA
3	A-	Blue
4	B+	Green
5	NA	NA
6	B-	Black

MLx11



Pin	Phase	Color
1	B-	Black
2	NA	NA
3	B+	Green
4	A-	Blue
5	NA	NA
6	A+	Red

MLx14, MLx17 and MLx23

Lead Color	Phase
Red	A+
Blue	A-
Green	B+
Black	B-

- MLx14, MLx17 and MLx23 motors come standard with flying leads
- 26 AWG lead wires for MLx14
- 22 AWG lead wires for MLx17 and MLx23
- Other lead wire gauges available - contact Thomson for more details

Glossary

Accuracy	A measurement of precision. Perfect accuracy, for example, means advancing a lead nut linearly one inch from any point on a screw will always require the exact same number of revolutions.
Axial Load	A load passing through the center axis of the lead screw.
Backdrive	Application of a force on a lead nut to cause rotation of the screw; in essence, converting linear to rotary motion.
Backlash	The axial or radial free motion between the lead nut and lead screw; a measure of system stiffness and repeatability.
Bipolar Motor	Motor with two phases and a single winding per phase (4 lead wires). All Thomson standard stepper motors are bipolar.
Chopper Drive	A constant current stepper motor drive that operates by quickly cycling power on and off, or "chopping."
Column Load	Column loading is the compression load on the screw. This load has a tendency to buckle the screw and is dependent on screw diameter, screw length and type of mounting.
Concentricity	Condition where the median points of two or more radially-disposed features are congruent with the axis (or center point).
Critical Speed	The condition where the rotary speed of the assembly sets up harmonic vibrations. These vibrations are the result of shaft diameter, unsupported length, type of bearing support, lead nut mounting method and/or screw rpm. Vibrations may also be caused by a bent screw or faulty installation alignment.
Drag Torque	The amount of torque required to drive the unloaded lead screw.
Driving Torque	The amount of effort required to turn the lead screw and move the load.
Dynamic Load	Load applied to stepper motor linear actuator assembly while in motion.
Efficiency (Lead Screw)	Expressed as a percentage, the ability of a lead screw assembly to convert torque to thrust with minimal mechanical loss. Thomson lead screws range in efficiency from 35 to 85%.
Efficiency (Motor)	Expressed as a percentage, the motor's ability to turn electrical energy into mechanical energy with minimal thermal loss. Thomson stepper motors range in efficiency from 65 to 90%.
End Fixity or End Bearing Support	How the ends of the lead screw are fixed or supported.
Holding Torque	Torque required to rotate motor shaft while all coils are fully energized with a steady state DC current.
Inertia	The level of rotational resistance of a lead screw or shaft.
Lead	The axial distance a screw travels during one revolution. If thread is 1 start, lead = pitch.
Microstepping	Dividing the motors natural full step by smaller increments. Example: 1.8 ° step motor microstepped at 64× will mean that 1 pulse is now 1.8 °/64 = 0.028 °.
Perpendicularity	Condition of a surface, center plane, or axis at a right angle to a plane or axis.
Pitch	Distance measured between adjacent threads of the lead screw - if thread is 1 start, then pitch = lead.
Pulse Rate	The number of pulses per second (pps) applied to the windings of the motor. 1 pulse = 1 step.
Repeatability	A measure of constancy that is directly related to axial backlash. Higher backlash equates to lower repeatability and may be corrected by preloading the lead nut if required.
Resolution	The linear distance the stepper motor linear actuator will actuate the lead nut or screw per input pulse.
Resonance	Vibration occurring when a mechanical system operates within an unstable range.
Runout	Composite tolerance used to control the functional relationship of one or more features of a part to an axis.
Side Load (Radial)	A load applied perpendicular to the lead screw axis. Not recommended for lead screw applications as it will reduce functional life.
Static Load	Static load is the maximum non-operating load capacity above which failure of the motor and/or lead nut occurs.
Straightness	Condition where an element of a surface, or an axis, is in a straight line.
Stroke	The maximum length of extension of a lead nut on the lead screw.
Thrust Force or Thrust Load	Thrust load is loading parallel to and concentric with the centerline of the screw which acts continuously in one direction. Thrust loading is the proper method of attaching the load to the lead screw assembly.
Travel/Step or Travel Rate	The linear translation of a lead nut or screw for one full step of the motor.
